Research Interests

In my research, I want to eliminate the intellectual barrier-to-entry for developers who want to use emerging hardware to develop efficient and reliable systems. To this end, I aim to create tools which developers can use to automatically reason about the characteristics of new hardware so that they can better leverage its capabilities without sacrificing the correctness of their applications. My current focus is in the development of efficient and reliable systems using emerging persistent main memory technologies. I am also broadly interested in software testing, verifiable systems, and tools which allow for easier development of correct systems.

Education

The University of Michigan Sept. 2018–Present

Ph.D. in **Computer Science** (Candidate)
Advisor: Assistant Professor **Baris Kasikci**
GPA: 3.961

The University of Texas at Austin Aug. 2013–May 2018

B.S. in **Computer Science**
Special Honors: Turing Scholars Honors Program
Thesis: The Advantages of a Transactional Interface: Porting Applications to TxFS

B.S. in **Electrical Engineering**
Senior Design Project: Wearable Biometric Monitor
Minor in **Biblical Hebrew**

Talks

Towards Bug-free Persistent Memory Applications

- IBM Hybrid Cloud Infrastructure Research (Invited Talk) Jun. 2021
- Non-Volatile Memories Workshop (NVMW '21) Mar. 2021

HIPPOCRATES: Healing Persistent Memory Bugs Without Doing Any Harm

- Conf. on Architectural Support for Programming Languages and Operating Systems (ASPLOS '21) Apr. 2021

Rethinking File Mapping for Persistent Memory

- Applications Driving Architectures Center (Liaison Meeting) Feb. 2021
- USENIX Conference on File and Storage Technologies (FAST '21) Feb. 2021
- Applications Driving Architectures Center (Liaison Meeting) Aug. 2019
- Applications Driving Architectures Center (Liaison Meeting) Feb. 2019

AGAMOTTO: How Persistent is your Persistent Memory Application?

- University of Washington (Invited Talk) Jan. 2021
- USENIX Symposium on Operating Systems Design and Implementation (OSDI '20) Nov. 2020
- Applications Driving Architectures Center (Liaison Meeting) Sept. 2020
- Applications Driving Architectures Center Symposium May. 2020

Patents

Video Frame Brightness Filter US Patent App. 16/210,380

User-Specific Video Frame Brightness Filter US Patent App. 16/210,578

Color-Specific Video Frame Brightness Filter US Patent App. 16/210,667

Employment

University of Michigan Ann Arbor, Michigan, USA

Graduate Research Assistant Sept. 2018–Present

- Creating novel techniques for improving the reliability of system software for persistent main memory (PM)
- Created AGAMOTTO [5], a symbolic-execution-based approach to finding bugs in PM systems
- Created HIPPOCRATES [3], a compiler tool for automatically fixing bugs found in PM systems
- Optimized file-mapping structures for PM file systems, leading to up to 45% increases in overall throughput [4]
- Developed techniques for secure speculative execution on modern processors (SPOT [1], NDA [6])
- Developed **Lapidary**, a framework for accelerating microarchitecture simulations

Microsoft Redmond, Washington, USA

Software Engineering Intern May 2018–Aug. 2018

- Created real-time video processing module to automatically adjust brightness for low-vision users
- Led invention of novel techniques for smooth brightness adjustment

The University of Texas Austin, Texas, USA

Undergraduate Research Assistant Aug. 2017–May 2018

- Aided in the development and evaluation of TxFS [7]
- Modified applications to work with a transactional interface as an Honor's Thesis project

Microsoft Bellevue, Washington, USA

Software Engineering Intern May 2017–Aug. 2017

- Designed C# web client library and PowerShell Cmdlet for Exchange data acquisition
- Improved existing REST service by adding features and eliminating defects

Google Seattle, Washington, USA

Software Engineering Intern May 2016–Aug. 2016

- Designed new modular optimization for Flume C++ backend to remove redundant operations
- Implemented optimization tasks that could be run at any time and still maintain graph invariants

Tableau Software Seattle, Washington, USA

Software Engineering Intern May 2015–Aug. 2015

- Created Puppet manifests to deploy product code and support software
- Created extensive validation tests and automated current infrastructure

Tableau Software Seattle, Washington, USA

Software Engineering Intern May 2014–Aug. 2014

- Created ETL scripts to recover and transform product usage data for internal analysis
- Repaired and maintained existing data set for use by marketing and quality assurance teams

Technical Skills

- **Languages**: Proficient in C, C++, Python. Familiar with C#, Java, Go
- **Frameworks**: Proficient with LLVM, KLEE, PMDK, pandas, matplotlib

Honors and Awards

Facebook Fellowship Finalist	2021
IEEE Micro 2021 IEEE Top Picks Honorable Mention	2021
IEEE Micro 2019 IEEE Top Picks Honorable Mention	2019
Richard H. Orenstein Graduate Fellowship in Memory of Murray Orenstein	2018–2019
USENIX Annual Technical Conference Best Paper Award	2018
National Science Foundation (NSF) Research Experiences for Undergraduates (REU) Grant	2018
CRA Outstanding Undergraduate Researcher Award (Honorable Mention)	2017
Dusty and Doris Duesterhoeft Endowed Presidential Scholarship	2017
Leola W. and Charles H. Hugg Trust Scholarship	2013–2016
College of Natural Sciences Book Award for Academic Excellence	2016
Boyce Family Scholarship	2016
Carl R. Trull Endowed Presidential Scholarship	2015
Edward Morgan and Rebecca Brown Case Endowed Presidential Scholarship	2014
